

Find the slope:

1)

2) Points $(-3, 4)$ and $(-5, 7)$

3) If the y varies directly with x when $x = 5$ and $y = 7$, what would be the value of y when $x = 4$?

4) Draw a line for $X = 2$ and $y = -3$ 

5) Write the equations for the lines:

6) Graph and Label the following Equations:

A) $y = \frac{4}{3}x - 2$

B) $3x - 6y = -12$

C) $y - 1.5 = -2(x - 4.5)$

7) Write an equation that is parallel to $y = -3x + 5$ and passes through the point $(2, -1)$.

8) Write an equation that is perpendicular to the equation $y - 2 = -2(x + 5)$ and passes through the points $(1, 6)$.
